

Fo-Poxy (Peel Coat)

DESCRIPTION:

A single component, fast drying, polymer based peelable / strippable coating. This high build coating is resistant to chemicals, atmospheric corrosion, wear & abrasion. It forms a tough rubbery film coat that can be easily peeled-off whenever desired without using any tools or solvents. This highly efficient coating provides protection against rust, corrosion, abrasion and scratches, both during shipment and storage. It can be used on metals, rigid plastics & over most painted surfaces.

PRINCIPAL USES:

Protection of Dies and moldings, precision tools & components, guages, spare parts, coating of flange plates in highly corrosive environment so that nuts don't get clogged due to rust formation, coating of sensitive parts, vessel or equipments during transport.

FEATURES AND BENEFITS:

- Excellent color retention after prolonged exposure to weathering.
- Watertight-It dries to an impermeable film that serves as a watertight finish
- High abrasion resistance-It has exceptional abrasion resistance for a paint film, and is able to withstand repeated scratching, scrubbing and cleaning.
- It is also a highly durable coating for industrial plants because of its strong resistance to chemical attacks, pollution & corrosive industrial environments.

COLORS: Clear, Black, Red, Green, Blue and Yellow

APPLICATION: By brush

Manufactured by :

AQUADRA FORSPEC PVT. LTD.
